

## **Spontaneous application (M/F)**

### **Description of the company:**

Venture Orbital Systems is a young start-up in the aerospace sector whose main activity lies in the development of an orbital nano-launcher dedicated to CubeSats operators named Zephyr. The company recently moved to the region of Reims to begin the design and development phases of its launcher and its Navier rocket engine.

### **Job description:**

Integrated within the Venture Orbital Systems teams, you will participate in the development of our nano-launcher. We are looking for experienced but also young and motivated profiles. Opportunities are open in propulsion, mission analysis, GNC, launcher architecture and many others.

### **Qualifications :**

You are passionate about space and already have some experience in the field. Working in a startup imposes rigor and a great autonomy but will allow you to blossom on many themes. You have a developed team spirit and are ready to go out of your comfort zone.

### **Further information:**

Location : 8 Allée du vignoble, Reims, 51100
